---

## Summary

A ph.d student majoring in computer science at Georgia Tech. Open source enthusiast and hacker specializing in web domain and linux-based system. WebKit and GNOME project contributor. More than 8 years experience at major players in the industry and academy. Interested in opportunities related with web technology and relevant system, system security, computer graphics.

## Education

08/2017 - present	<b>Georgia Tech in Atlanta, GA, U.S.A.</b>
- 08/2019	M.S. in Computer Science (Speciality: Computing System) Ph.D student in Computer Science
03/2000 - 06/2008	<b>Ajou University in Suwon, South Korea</b> B.E. in Digital Media (intensive major course) B.E. in Information and Computer Engineering (second major)

## Research Interests

Web Technology, System, Security, Computer graphics, Open source

## Research

08/2017 - present	<b>Research assistant at School of Computer Science, Georgia Tech</b> I have explored diverse research topics related to system and security.  Idle profiler I am developing a profiler that identifies idleness for multi-threaded programs. Especially, the profiler focuses on the idleness caused by synchronization primitives (e.g., mutex, spinlock). With this tool, developers can have opportunities in performance optimization.  Low-volume DoS attack countermeasure In this project, I designed and implemented a countermeasure against low-volume DoS attacks that exhaust system resources with small volume requests. The defense mechanism continuously watches resource usages (e.g., cpu and memory) per packet per layer, using linux profiling technology such as kprobe/uprobe and eBPF.
06/2016 - 07/2017	<b>Research associate at School of Computer Science, Georgia Tech</b> As a research scientist, I contributed to research projects in which Georgia Tech partakes for national interests.

## Professional Experience

05/2019 - 08/2019	<b>Intern at Samsung Research America</b> in Mountain View, CA I conducted three tasks in a health application development team. The first task was to make a client program automatically test its UI based on Tizen UI test automation framework. The second task was to profile memory use of the program with Valgrind. Lastly, I developed a mechanism of file transfer via Bluetooth LE.
08/2012 - 03/2016	<b>Software engineer at Collabora Ltd.</b> Collabora Ltd. is a UK based software consultancy specializing in delivering the benefits of open source to the commercial world. As a software engineer in web domain, I participated in

many interesting projects based on WebKit and Chromium/Blink.

#### [WebKitClutter port for Apertis](#)

Apertis is an IVI system based on linux, driven by Bosch. It was open-sourced later. For the project, I worked on shifting existing features and APIs to WebKit2 multi-process based architecture. Also, improving performance by using OpenGL and multi-threading architecture were my major contributions. ([link](#), [patches](#))

#### [GNOME Web \(a.k.a Epiphany\) for Raspbian](#)

This project aimed to bring full browser experience to Raspberry Pi users using Raspbian, the default OS for Raspberry Pi and one of Debian variation. At that time, I improved performance for playing html5 video and scrolling. In addition, I developed some new features such as Disk Image Cache and Memory Pressure Handler based on linux cgroup memory resource controller. ([link](#))

#### [SDK 2.5, 3.0 and 4.0 for Smart TV Alliance](#)

Smart TV Alliance is a union of TV manufacturers and developers. They provide a SDK including an IDE and an Emulator compliant with each specifications for app developers to test their apps. In this project, I made all webkit changes to meet each requirement of SDK 2.5-4.0.

07/2008 - 08/2012

#### **Assistant Software engineer at Samsung Electronics** in Suwon, South Korea

When I worked for SAMSUNG Electronics, I was in Software Platform Team, DMC R&D Center and performed several research projects. Some of them already went in public as products.

#### WebKitEFL port for TIZEN

I contributed to WebGL implementation and hardware acceleration via OpenGL ES. This was an initial effort to add OpenGL ES backend to the WebKit Project.

#### Full browser for SAMSUNG Smart TV 2010

This project brought full browser experience to SAMSUNG Smart TV series released in 2010. My role was to build, integrate and implement UI by using html, css and javascript.

#### Maple, in-house web engine for SAMSUNG connected TVs and all-in-one printers.

Maple was an in-house web engine that adopted the SpiderMonkey as javascript interpreter from the Mozilla Gecko engine. I ported the TraceMonkey, a new javascript engine of Gecko into the project.

07/2007 - 06/2008

#### **Intern at Samsung Software Membership** in Suwon, South Korea

Two projects were performed in this period. They were very experimental and related with computer graphics. Also, I developed a 3D train racing game by using DirectX on MS Windows during this period. ([video](#))

## Open Source Projects

10/2013 - present

#### [Member at GNOME foundation](#)

I made contributions to WebKitGTK+. Also, I've translated GNOME Web (a.k.a Epiphany) to Korean and its help document since 2014. ([patches](#))

01/2015 - present

#### **Contributor at Chromium/Blink**

I have 30 landed patches so far. One of my contribution is to make chromium/blink support the 'font-size-adjust' css property. ([patches](#))

04/2013 - 03/2019

#### **Committer at WebKit**

I have contributed WebGL enhancement, hardware acceleration through OpenGL/ES, layout bugfix, memory pressure handler for linux platform and WebKitGTK+ port features such as JPEG-XR decoder, customizable widgets and threaded compositor enhancement. ([patches](#))

## Skills

WebKit, Blink/Chromium, GNOME, Linux, C/C++, Python, HTML/CSS/Javascript, Objective-C, Java, OpenGL/OpenGL ES, Clutter, Computer Graphics, GTK+, eBPF, BCC, Ethereum, Git, OBS, Clang, LLVM, GStreamer, Tizen, Linux Perf, Bluetooth LE, React Native
